to the patient's reported history of ureter reconstruction. 3. Small fat-containing midline ventral abdominal hernias. No bowel herniation. 3. Small hydroceles. 4. Additional nonemergent findings as above. This document passed e-signature verification by Dr. Carey Guidry on 1/14/2020 11:39 AM

Brief HPI and Hospital Course:

Robert M Overstreet is a 57 y.o. with PMhx of DVT, GERD, Hypercoagulable state, several surgeries and RLS presented with nausea/vomiting and admitted with above. Pt was started on IV fluids along with clear liquids and antiemetics and improved back to baseline. His hospital was complicated due to having elevated INR, no signs of active bleeding, but it trended down. His hb was also noted to drop significantly but again no signs of active bleeding. He was given 1 unit of pRBC and is now stable for discharge. He also has really bad RLS and requip was added with great results, will give prescription. Pt is stable for discharge and advised pcp follow-up next week.

PHYSICAL EXAM

GEN: Conversant, no apparent distress.

RESP: Normal respiratory effort. Clear to auscultation bilaterally.

CVS: S1-S2 audible.
